

Meet the technology that will bring driverless cars to the streets of Europe

Indra is spearheading a European project that will be testing self-driving cars in three major capital cities

MONITORING CENTRE OPERATED BY THE TRAFFIC AUTHORITIES

- Manages and supervises traffic
- Manages incidents

Sends notifications to the self-driving car

Expands its "vision"

Triggers actions: decreases speed, changes lanes ...

SMART TRANSPORTATION SERVICES BASED ON CO-OPERATING SYSTEMS

They facilitate the secure exchange of information

Sends data to the control centre

Self-driving vehicle as a sensor

! Slow vehicle

! Rain

! Accident

! Road works...

BENEFITS:

Facilitates circulation of driverless vehicles in urban hubs

Favours their safe coexistence with other vehicles

Allows for progress within the regulatory framework and the traffic rules adapted to this new type of transport

Contributes to the proper circulation and movement of self-driving vehicles across different European countries
